ACADEMIC PROJECTS

Basketball Live Stat Tracking Web Application

- Developed a full web program using Angular individually
- Implemented excel output functionality for box score statistics
- Program provides specific lineup data insights along with full +/- tracking.
- Features real time data synchronization for exact minute tracking

Capstone Project: Sports Betting Value Predictor

- Developed a machine learning model to predict NBA game outcome probabilities, utilizing historical and real-time statistics.
- Deployed a hybrid cloud architecture integrating our frontend, backend and database services
- Project development cycle followed an Agile methodology, operating within a team releasing iterative versions of our project

WORK EXPERIENCE

Fitness Advisor (Sales)

Oakville, ON | April 2022-Present

GoodLife Fitness

- Identified new and potential customers and marketed membership and personal training by implementing effective marketing strategies
- Achieved a happy member rating for over 100+ members
- Maintain a daily average of over 20+ leads generated
- Consistently achieved all established monthly sales goals and always exceed 20% training sales

AI Solutions Developer

Oakville, ON | Dec 2025-Jan 2026

Riipen Client: Stonebridge Imports

- Developed a high-performance React + TypeScript web application using Vite and Tailwind CSS to automate the design and production of retail informational displays
- Integrated OpenAI's GPT-4o-mini API to engineer a custom AI writing Assistant to automatically summarize crystal descriptions into beginner-friendly, 40–60 word paragraphs
- Developed a recommendation engine in TypeScript to identify complementary products, streamlining the shopping workflow and improving internal data-driven product selection
